Our participations:

- **Soe Lwin**
  Create brand logo variation and color.
  Participate in brainstorming and ideation.

- **Ei Myat Yadanar**
  Idea creation and create design system, UI design and prototype for shop owner web app.

- **Hnin Hsu Yati**
  Brainstorming and support for frontend development.

- **Aung Heein Zay**
  Full stack implementation, create web app for delivery operators and brainstorming.

- **Aye Chen Myae Moe**
  Backend implementation, ideation and coordination.

- **May Phoo Kyaw**
  Idea creation and create design system, UI design and prototype for rider web app.

- **May Thuzar**
  UX thinking, analytics, deck preparation and project support.

Parcel Tracking Web App

SurferTrack

Problem Statement

In Myanmar, business owners struggle to coordinate with delivery services and riders due to manual records (book and paper) and poor parcel visibility, causing delays, errors, and communication issues.

Difficult Parcel Tracking

Shop Owner

Delayed Rider Assignment

Delivery Operator

Missed Delivery Schedules

Rider

Three roles feel the friction differently

- **Shop Owners:**

  Difficult to identify which parcels are delivered, cancelled, returned, or still pending using handwritten records.

- **Delivery Operators:**

  Sometimes forget to assign parcels to riders on time, causing delivery delays.

- **Riders:**

  Without an organized delivery list, managing multiple stops and delivery priorities can be challenging.

One parcel record. Three focused experiences.

SurferTrack helps all three roles create orders, sort and assign parcels, track deliveries, view parcel details, and generate reports.

Every parcel has a story.
But can everyone see it?

A responsive web app concept to help shop owners, delivery operators, and riders stay aligned from order to delivery.

How it work. Demonstration

- **For All 3 Roles**

A focused starting market

21,088

Registered Online Sellers (2023-2025)

46,014

Registered SMEs (2023)

Below average

Logistics performance (2026)

*Micro, Small, and Medium Enterprises (MSMEs) make up roughly **99%** of all operating businesses in Myanmar. (2026)

***The World Bank's 2026 report** shows that Myanmar's logistics performance was **below average** across all six indicators.

A simple business model

Free Trial

Basic parcel creation, status tracking, and a small usage allowance for a limited time.

Monthly subscription

Charge shops or operators for higher parcel volume, team access, history, and reports.

Partner plan

Explore delivery-partner plans or integration fees only where there is clear partner value.

What has been built and Future Tasks

We built MVP Web App

MVP Web App for all three roles - shop owners, delivery operators and riders. We have created IA, MVP acceptance criteria & definition of done, competitor analysis, user personas.

Future Plan

Develop a customer-facing web app that allows users to track their parcels by entering a parcel code or scanning a QR code.

Focus on UX research and design, including user interviews, identifying customer needs, and providing essential tracking information.

Customize the experience for car cargo delivery services to ensure the features and information meet customers' specific needs.

Let’s make parcel handoffs clear and easier

“One platform. Clear tracking. Better coordination. We simplify parcel management by connecting shop owners, delivery operators, and riders in one easy-to-use system.”

Why choose our product?

- Easy Tracking
- Real-Time Visibility
- Less Manual Work
- Better Coordination
- More Transparency

Thank You!

Thank you for your time and consideration. We look forward to your evaluation. Presented and built with passion.
